

ESP32 Smart Home

Le kit de maison intelligente KEYESTUDIO IoT fournit une bonne compréhension initiale des projets et applications IoT. comprend des composants pour plusieurs projets IoT avec des didacticiels en ligne étape par étape pour la plate-forme en ligne du projet Arduino IDE.

Size: 225*165*145mm

Weight: 480g

- Le kit IoT est basé sur la carte ESP32, qui combine les fonctionnalités d'une carte d'extension et d'une carte d'extension Wi-Fi. Tout ce dont vous avez besoin est une connaissance de base d'Arduino et une expérience en réseau pour ajouter de la connectivité à vos conceptions.
- Y compris le contrôle de l'application téléphonique, le code Morse pour ouvrir la porte, le balayage de la carte RFID, la fermeture automatique de la fenêtre, la lumière ambiante et d'autres fonctions IoT. et prend en charge le langage C et MicroPython.
- Forme tridimensionnelle, avec divers éléments de détection, les étudiants peuvent librement combiner et appliquer, et simplement concevoir divers scénarios tels que l'environnement domestique, la sécurité, la surveillance, la prévention des catastrophes, etc., ce qui convient très bien aux enseignants pour mettre en place des micro-cours. Une variété de modules de

capteurs, joliment emballés.

- Tutoriel-Télécharger <https://fs.keyestudio.com/KS5009>

GPIO ESP32 Et Capteurs/Actionneurs

- GPIO 12 ⇒ LED
- GPIO 16 ⇒ Bouton Gauche
- GPIO 27 ⇒ Bouton Droit
- GPIO 14 ⇒ PIR(Detection presence ON=1 OFF=0)
- GPIO 25 ⇒ BUZZER
- GPIO 13 ⇒ SERVO Porte Avant
- GPIO 05 ⇒ SERVO Fenetre
- GPIO 34 ⇒ Capteur Humidite
- GPIO 26 ⇒ LED Neopixel (4)
- GPIO 18 ⇒ Ventilateur Sens 1
- GPIO 19 ⇒ Ventilateur Sens 2
- GPIO 23 ⇒ Gaz
- I2C 0x27 ⇒ Afficheur

Test Variation LED

[Ledvariation.ino](#)

```
#include <analogWrite.h> //Import PWM output library files
#define led_y 12 //Define LED pins

void setup(){
  pinMode(led_y, OUTPUT); //Set pin to output mode
}

void loop(){
  for(int i=0; i<255; i++) //The for loop statement increments the
  value of variable i until it exits the loop at 255
  {
    analogWrite(led_y, i); //PWM output, control LED brightness
    delay(3);
  }
  for(int i=255; i>0; i--) //The for loop statement continues to
  decrease the value of variable i until it exits the loop at 0
  {
    analogWrite(led_y, i);
    delay(3);
  }
}
```

Test LED

LedON-OFF.ino

```
#define led_y 12 //Define the yellow led pin to 12

void setup() { //The code inside the setup function runs only once
  pinMode(led_y, OUTPUT); //Set pin to output mode
}

void loop() { //The code inside the loop function will always run
  in a loop
  digitalWrite(led_y, HIGH); //Light up the LED
  delay(200); //Delay statement, in ms
  digitalWrite(led_y, LOW); //Close the LED
  delay(200);
}
```

Test Boutons

TestBoutonGauche-Droit.ino

```
#define btn1Gauche 16
#define btn2Droit 27

void setup() {
  Serial.begin(9600);
  pinMode(btn1Gauche, INPUT);
  pinMode(btn2Droit, INPUT);
}

void loop() {
  boolean btn1_val = digitalRead(btn1Gauche);
  boolean btn2_val = digitalRead(btn2Droit);
  Serial.print("button1Gauche = ");
  Serial.print(btn1_val);
  Serial.print(" ");
  Serial.print("button2Droit = ");
  Serial.println(btn2_val);
  delay(100);
}
```

Test PIR

Test_PIR.ino

```
#define pyroelectric 14

void setup() {
  Serial.begin(9600);
  pinMode(pyroelectric, INPUT);
}

void loop() {
  boolean pyroelectric_val = digitalRead(pyroelectric);
  Serial.print("pyroelectric value = ");
  Serial.println(pyroelectric_val);
  delay(50);
}
```

Test PIR LED

PIR_LED.ino

```
#define pyroelectric 14
#define led_y 12 //Define the yellow led pin to 12
void setup() {
  Serial.begin(9600);
  pinMode(pyroelectric, INPUT);
  pinMode(led_y, OUTPUT); //Set pin to output mode
}

void loop() {

Test LED NeoPixel

[Test_Neopixel.ino](#)

```
#include <Adafruit_NeoPixel.h>
#ifdef __AVR__
  #include <avr/power.h> // Required for 16 MHz Adafruit Trinket
#endif
// Which pin on the Arduino is connected to the NeoPixels?
// On a Trinket or Gemma we suggest changing this to 1:
```

```
#define LED_PIN 26
// How many NeoPixels are attached to the Arduino?
#define LED_COUNT 4
// Declare our NeoPixel strip object:
Adafruit_NeoPixel strip(LED_COUNT, LED_PIN, NEO_GRB + NEO_KHZ800);

void setup() {
  // These lines are specifically to support the Adafruit Trinket 5V 16
  MHz.
  // Any other board, you can remove this part (but no harm leaving
  it):
  #if defined(__AVR_ATtiny85__) && (F_CPU == 16000000)
    clock_prescale_set(clock_div_1);
  #endif
  // END of Trinket-specific code.

  strip.begin(); // INITIALIZE NeoPixel strip object
  (REQUIRED)
  strip.show(); // Turn OFF all pixels ASAP
  strip.setBrightness(50); // Set BRIGHTNESS to about 1/5 (max = 255)
}

// loop() function -- runs repeatedly as long as board is on -----
-----

void loop() {
  // Fill along the length of the strip in various colors...
  colorWipe(strip.Color(255, 0, 0), 50); // Red
  colorWipe(strip.Color( 0, 255, 0), 50); // Green
  colorWipe(strip.Color( 0, 0, 255), 50); // Blue

  // Do a theater marquee effect in various colors...
  theaterChase(strip.Color(127, 127, 127), 50); // White, half
  brightness
  theaterChase(strip.Color(127, 0, 0), 50); // Red, half brightness
  theaterChase(strip.Color( 0, 0, 127), 50); // Blue, half
  brightness

  rainbow(10); // Flowing rainbow cycle along the whole
  strip
  theaterChaseRainbow(50); // Rainbow-enhanced theaterChase variant
}

// Some functions of our own for creating animated effects -----
-----

// Fill strip pixels one after another with a color. Strip is NOT
  cleared
// first; anything there will be covered pixel by pixel. Pass in color
```

```
// (as a single 'packed' 32-bit value, which you can get by calling
// strip.Color(red, green, blue) as shown in the loop() function
// above),
// and a delay time (in milliseconds) between pixels.
void colorWipe(uint32_t color, int wait) {
    for(int i=0; i<strip.numPixels(); i++) { // For each pixel in
strip...
        strip.setPixelColor(i, color);      // Set pixel's color (in
RAM)
        strip.show();                       // Update strip to match
        delay(wait);                       // Pause for a moment
    }
}

// Theater-marquee-style chasing lights. Pass in a color (32-bit value,
// a la strip.Color(r,g,b) as mentioned above), and a delay time (in
ms)
// between frames.
void theaterChase(uint32_t color, int wait) {
    for(int a=0; a<10; a++) { // Repeat 10 times...
        for(int b=0; b<3; b++) { // 'b' counts from 0 to 2...
            strip.clear();        // Set all pixels in RAM to 0 (off)
            // 'c' counts up from 'b' to end of strip in steps of 3...
            for(int c=b; c<strip.numPixels(); c += 3) {
                strip.setPixelColor(c, color); // Set pixel 'c' to value
'color'
            }
            strip.show(); // Update strip with new contents
            delay(wait); // Pause for a moment
        }
    }
}

// Rainbow cycle along whole strip. Pass delay time (in ms) between
frames.
void rainbow(int wait) {
    // Hue of first pixel runs 5 complete loops through the color wheel.
    // Color wheel has a range of 65536 but it's OK if we roll over, so
    // just count from 0 to 5*65536. Adding 256 to firstPixelHue each
time
    // means we'll make 5*65536/256 = 1280 passes through this outer
loop:
    for(long firstPixelHue = 0; firstPixelHue < 5*65536; firstPixelHue +=
256) {
        for(int i=0; i<strip.numPixels(); i++) { // For each pixel in
strip...
            // Offset pixel hue by an amount to make one full revolution of
the
            // color wheel (range of 65536) along the length of the strip
```

```

    // (strip.numPixels() steps):
    int pixelHue = firstPixelHue + (i * 65536L / strip.numPixels());
    // strip.ColorHSV() can take 1 or 3 arguments: a hue (0 to 65535)
or
    // optionally add saturation and value (brightness) (each 0 to
255).
    // Here we're using just the single-argument hue variant. The
result
    // is passed through strip.gamma32() to provide 'truer' colors
    // before assigning to each pixel:
    strip.setPixelColor(i, strip.gamma32(strip.ColorHSV(pixelHue)));
}
strip.show(); // Update strip with new contents
delay(wait); // Pause for a moment
}
}

// Rainbow-enhanced theater marquee. Pass delay time (in ms) between
frames.
void theaterChaseRainbow(int wait) {
    int firstPixelHue = 0; // First pixel starts at red (hue 0)
    for(int a=0; a<30; a++) { // Repeat 30 times...
        for(int b=0; b<3; b++) { // 'b' counts from 0 to 2...
            strip.clear(); // Set all pixels in RAM to 0 (off)
            // 'c' counts up from 'b' to end of strip in increments of 3...
            for(int c=b; c<strip.numPixels(); c += 3) {
                // hue of pixel 'c' is offset by an amount to make one full
                // revolution of the color wheel (range 65536) along the length
                // of the strip (strip.numPixels() steps):
                int hue = firstPixelHue + c * 65536L /
strip.numPixels();
                uint32_t color = strip.gamma32(strip.ColorHSV(hue)); // hue ->
RGB
                strip.setPixelColor(c, color); // Set pixel 'c' to value
'color'
            }
            strip.show(); // Update strip with new contents
            delay(wait); // Pause for a moment
            firstPixelHue += 65536 / 90; // One cycle of color wheel over 90
frames
        }
    }
}
}
}
